

# **Fillable Flacon**

Interior Perfume  
Information for filling

Mercedes-Benz

**Purpose of fillable flacon:**

The Mercedes-Benz perfume diffuser flacon can release any perfume that is available in a liquid form. You can thus integrate your personal fragrance preference into the interior of your vehicle.

**Please note:**

Only use approved, commercially available perfumes. Perfumes not provided by Mercedes-Benz may differ in terms of the fragrance intensity. This is not a deficiency of the perfume diffuser, but rather a property of the selected fragrance. Essential perfume oils can also be used, however their scents are more intense than commercially available perfumes. We therefore recommend a small filling volume (2-3ml).

**Filling Instructions:****Step 1: Unscrewing.**

Unscrew the functional lid of the flacon and place it upside down on an absorbent cloth.

### **Step 2a: Filling from spray bottles.**

Hold the flacon at an angle and spray directly into the flacon (see diagram).

### **Step 2b: Filling from screw bottles.**

Pour the desired amount of liquid into the flacon (see diagram).

### **Step 3: Maximum filling amount.**

Do not exceed the maximum filling amount. The maximum filling amount is the underside of the flacon shoulder (see drawing).

### **Step 4: Sealing of the flacon.**

Remove the functional lid from the absorbent cloth and screw it hand-tight onto the thread of the glass flacon. Make sure that it is closed properly.

**Tips:**

First try a small volume of your liquid fragrance. This will be sufficient to assess your chosen perfume in the vehicle.

**Cleaning:**

The glass flacon can be cleaned in the dishwasher. The functional lid can be cleaned with a cloth and a commercially available window cleaning fluid.

**Limited liability:**

Mercedes-Benz is not liable for the damages incurred through aggressive liquid components on the durability of the seals and plastic parts of the functional lid. Mercedes-Benz is not responsible for any side effects of the diffusion of perfume into the car interior.
